

On 13th November, 2019 Greener Shipping Summit took place in Eugenides Foundation discussing on the latest developments in the IMO regarding SO_x, NO_x, CO₂ and PM emissions.

Our principals FUJI ELECTRIC were once again present in speakers' panel where Mr. Itsuro Mita referred to their technical and commercial updates in their Sox Scrubber.

FE-made SO_x scrubbers using cyclone technology

FUJI ELECTRIC SO_x Scrubbers in Greener Shipping Summit 2019

Fuji's scrubber has only half size of other conventional scrubber because of innovative cyclone technology and it can save not only space but also time for retrofit engineering and installation.

Unlike other scrubber's suppliers, Fuji Electric develops, manufactures, supplies and services all components required for EGCS including SO_x scrubber and gas analyzer.

Fuji Electric provides full maintenance services on various ports around the world for long-time support and satisfaction.
