

REMOTE NOx spot check

THE CHALLENGE

The maritime industry faces the challenge of complying with strict IMO regulations. In order to meet the exhaust gas standards, it requires the installation of an SCR system and also regular checks to ensure functionality.

THE SOLUTION

Coordinating service engineers for these on-site inspections can be difficult, especially due to the coordination with the ships' busy schedules. Our remote service solves this by ensuring compliance through fast and accurate NOx spot checks.

COMPLIANCE

This is ensured by competent employees who support you throughout the entire project phase and combine extensive know-how with the best advice.

OUR SERVICE

Discover the future of exhaust gas measurements on ships! Our revolutionary remote service uses state-of-the-art technology to accurately document compliance with stringent IMO regulations, including Tier III rules. No more expensive trips, no more unnecessary downtime. Our remote service is simple, efficient and environmentally friendly!

Tier III Compliance made EASY

Our innovative solution redefines the standards for efficient and environmentally friendly exhaust gas measurements. We use advanced technology to ensure that you do not only comply with strict IMO regulations, but also reduce your operating costs and minimize your environmental impact.

SCR Technology for lower NOx emissions

FAST & PRECISE

Certified measuring devices and an intuitive app enable fast and accurate NOx Spot Checks

COST EFFICIENCY

Save considerable costs compared to conventional on-site measurements.

SUSTAINABILITY

Reduce your CO2 footprint by avoiding traveling and improve the environmental impact of your ship operation at the same time.

TRUSTWORTHY

Our service is accepted by leading classification societies (e.g. DNV) and ensures safe compliance with regulations.

STEP BY STEP TO SMATER COMPLIANCE
