

MITSUI E&S and Sea Power Ltd. had the pleasure of hosting the **Technical Forum 2026** in Athens on October 16, bringing together technical directors and executives from the Greek shipping community for a day of knowledge sharing, collaboration, and technological innovation.

Held at the Athens Marriott Hotel, the forum **marked over 30 years of successful partnership between MITSUI E&S and Sea Power Ltd.**

The occasion was made even more special by **celebrating 100 years since MITSUI signed the B&W engine license agreement with Everllence** — a remarkable milestone reflecting a century of engineering excellence and technological evolution.

The forum explored key developments shaping the future of the maritime industry, including:

 **Green Initiatives & Engine Evolution:** Next-generation technologies supporting fleet efficiency and sustainability.

 **Performance Monitoring & Equipment:** Thrust sensor technology, advanced peripheral equipment, and solutions for enhanced operational performance.

 **LCO₂ Transportation & Engineering Innovation:** Advancements in liquid CO₂ transportation, presented in collaboration with **TGE Marine**.

 **Operational Excellence:** Practical case studies, cylinder condition maintenance, troubleshooting, and solutions for real-world fleet optimization.

 **Digital Initiatives:** Exploring the role of digital technologies in improving vessel performance and operational efficiency.

The forum provided a valuable platform for exchanging technical expertise, sharing practical insights, and strengthening relationships across the Greek maritime community.

We extend our sincere thanks to our principals MITSUI E&S, TGE Marine, our esteemed guest speakers, and all attendees who contributed to the success of this special event and made this inaugural MITSUI E&S Technical Forum in Athens a memorable occasion.

At Sea Power, we remain committed to supporting Greek shipowners with advanced marine technologies, reliable technical expertise, and dedicated operational support.
